Acknowledgments

We would like to personally acknowledge and thank all the people who have assisted and shared their expertise in making Unity 128 Version a reality for those with communicative disabilities. These people include in alphabetical order:

All the beta testers including the students, families, and support staff from Australia, the United Kingdom, and the United States of America; Snoopi Botten; Sarah Burger; Marcia Gemler, Charlene Hartzler; Dave Hershberger; Cliff Kushler; Regional Consultants from Liberator, Ltd.; Regional Consultants from Prentke Romich Company; Deb Tate; Linda Valot; Gail Van Tatenhove; Cherie Weaver; Connie Winkler; Diane Zimmerly; and many others unnamed.

We also would like to acknowledge that this project has been funded in part by the United States Department of Education through a Small Business Innovative Research grant.

The Unity 32 Version for Pathfinder was developed by Janet S. Lehr, with support from Russell T. Cross and Mark Zucco. Feedback and suggestions from the Prentke Romich Consultant Network was of significant help in bringing the project to a conclusion.

Special Notes for Pathfinder Owners

Using Unity 128

1. *Unity* 128 in Pathfinder is enhanced by the introduction of the Activity Row, an area of the display that can be used to show pictures. For example, selecting the JUICE icon will bring up pictures of various beverages. The sequences used in the DeltaTalker and the Liberator still work – the Activity Row simply adds an alternative way of selecting items.

2. There are only two Overlays; one for the *Single-Hit Vocabulary* and a second for the *Sequenced Vocabulary*. When using this manual, you do not need to use the "Vocabulary for Overlay 2" section.

3. When using the *Single-Hit Vocabulary*, refer to the Appendices in the "*Unity* 128 Version Tour Guide" for details of the Activities that are included or generated by selecting keys on the keyboard.

4. When using the Sequenced Vocabulary, the items that appear in the Activity Row when keys are pressed are the same as what are available using regular sequences. For example, APPLE + SCALES + APPLE will speak "pork," but pressing the APPLE then using the Activity Row <MEATS> <MORE> <MORE> <MORE> <pork> would also work. The second method allows a client to choose from pictures rather than a symbol sequence.

The Activity Row items are not listed. To find a word, check the Sort and select the Icon Sequence; the Activity Row will show the picture form.

Using Unity 32

1. The 32-location version of *Unity* for Pathfinder was designed to work exclusively on this device, making significant use of the Activity Row. This is why is isn't available on DeltaTalker or Liberator. A 32-location keyguard is needed to operate the system.

2. There is no "Vocabulary for Single-Hit" listed because the Overlay itself has the single words printed. Dynamic Activities are generated and these are documented in the "*Unity* 128 Version Tour Guide" in the Addendum Section "*Unity* 32 Version Single-Hit" section.

3. Details of the structure of both the *Single-Hit* and *Sequenced* vocabularies are found in the "*Unity* 128 Version tour Guide."
