SpringBoard USB Flash Drive Software Update Instructions

*NOTE: please read the instructions before downloading the update. You may want to print this page then proceed with the download.

*NOTE: To download and install this update you need:
SpringBoard Plus and 3.0x system software. To get new fixes to maps you will need to either load the default maps or reset the device to the factory defaults.

*** This software update will only work on a IBM compatible PC *******
*** No MAC version is available ***

Step 1: Backup your device vocabulary.
Step 2: Plug in your USB flash drive into the computer. (8MB free space is needed on the Flashdrive)
Step 3: Download the update file to your desktop.
Step 4: Copy the file to your USB flash drive.
Step 5: Once the file is copied, unplug the USB flash drive from the computer and plug it into your SpringBoard.
Step 6: Turn on your AAC device and plug in the charger.
Step 7: Reset the device by holding the ON/OFF button for ten seconds. The update will now begin.
Step 8: Once the update is done you can remove the USB flash drive.
Step 9: Unplug the charger once the device is running the new software.
Step 10: Reset the device to factory defaults.
Step 11: Load the vocabulary back into the device.
